

```
beforeEach(async () => {  
  _server = (await import('./api.js')).app  
  await once(_server, 'listening')  
  baseUrl = `http://localhost:${_server.address().port}`  
})
```

```
afterEach(done => _server.close(done))
```

```
const request = await fetch(`${baseUrl}/login`, {  
  method: 'POST',  
  body: JSON.stringify(data)  
})  
strictEqual(request.status, 401)  
const response = await request.json()  
deepStrictEqual(response, { error: 'user invalid!' })
```

@erickwendel\_

```
beforeEach(async () => {  
  _server = (await import('./api.js')).app  
  await once(_server, 'listening')  
  baseUrl = `http://localhost:${_server.address().port}`  
})  
  
afterEach(done => _server.close(done))
```

// each test case will have  
their own server instance

```
const request = await fetch(`${baseUrl}/login`, {  
  method: 'POST',  
  body: JSON.stringify(data)  
})  
  
strictEqual(request.status, 401)  
const response = await request.json()  
deepStrictEqual(response, { error: 'user invalid!' })
```

// no need to install supertest  
// use native fetch

# Flaky tests?
