Flaky tests?

```javascript
after(() => {
    // shows what is keeping the process alive
    const handles = process._getActiveHandles()
    // remove all handlers for child process
    for (const handle of handles) {
        if (!handle.stdin) continue

        handle.stdin.destroy()
        handle.stderr.destroy()
        handle.stdout.destroy()
    }
})
```
